Ultra-Fast High PSRR Low Noise Output Current, Low-Dropout Regulator

Features

- **Operating Voltage: 1.5V-7.0V**
- **High PSRR: 90dB@1KHz**
- **Output Voltage Accuracy: 1%**
- **Output Voltage: 1.0V,1.2V,1.5V,1.8V,2.5V,2.8V,3.0V,3.3V,4.0V,4.2V and 5.0V Optional Fixed**
- **Low Dropout Voltage:42mV@100mA**
- **Maximum Output Current: 500mA**
- **Excellent Line and Load Regulation**
- **Over-Temperature Protection**
- **Current Limiting Protections**
- **Short Circuit Protections**
- **ESD Rating (HBM): 8kV**
- **Lead Free and Green Device Available (RoHS Compliant), Available in SOT23, SOT23-5L, SOT89-3 and DFN1x1-4L Packages**

Applications

- **Battery-Powered Devices**
- **Reference Voltage Sources**
- **Other Low Voltage Power Suppliers**

General Description

The SL8620 is a positive voltage regulator with high accuracy, low noise, high speed, low drop-out voltage regulator with Chip Enable Pin, high ripple rejection and fast discharge function.

The SL8620 is designed specifically for applications where high PSRR is a critical parameter. This device maintains low IQ consumption and low noise even in dropout mode.

The SL8620 has an output voltage from 1.0V, 1.2V, 1.5V, 1.8V, 2.5V, 2.8V, 3.0V, 3.3V, 3.6V, 4.0V, 4.2V and 5.0V or other voltages applicable as customer specified.

The SL8620 has the current limiter's fold-back circuit operates as a short circuit protection as well as the output current limiter for the output pins.

The SL8620 is available in SOT23, SOT23-5, SOT89-3 and DFN1x1-4L packages.

Note: SILONG lead-free products contain molding compounds/die attach materials and 100% matte tin plate termination finish, which are fully compliant with RoHS and compatible with both SnPb and lead-free soldiering operations. SILONG lead-free products meet or exceed the lead-free requirements of IPC/JEDEC J STD-020C for MSL classification at lead-free peak reflow temperature.
SILONG reserves the right to make changes to improve reliability or manufacturability without notice and advise customers to obtain the latest version of relevant information to verify before placing orders.

Application Information

Input Capacitor Selection

The input capacitors used with the SL8620 must be carefully selected for regulator stability and performance. Using a capacitor whose value is >1uF one the SL8620 input and amount of capacitance can be increased without limit. The input capacitor must be located no more than 0.5-inch distance from the input pin of the IC and retured to a clean analog ground. Any good quality ceramic or tantalum can be used for this capacitor. The capacitor with larger value and lower ESR provides better PSRR and line-transient response.

Output Capacitor Selection

The SL8620 requires surface-mount multi-layer ceramic capacitors. These capacitors are small, inexpensive, and have very low ESR (<15ohm typical). Tantalum capacitors, and aluminum electrolytic capacitors generally are not recommended for use with SL8620 due to their high ESR compared to ceramic capacitors.

For most applications, ceramic capacitors with an X7R or X5R temperature characteristic are preferred for use with the SL8620. These capacitors have tight capacitance tolerance(as good as ±10%) and hold their value over temperature (X7R: ±15% over -55°C to 125°C;X5R: ±15% over -55°C to 85°C)

Output capacitor of larger capacitance can reduce noise and improve load transient response, stability, and PSRR. The ouput capacitor should be located no more than 0.5-inch distance from the Vout Pin of the SL8620 and returned to a clean analog ground.

Layout Considerations

To improve AC performance such as PSRR, output noise, and transient response, it is recommended that the PCB be designed with separate ground planes for Vin and Vout, with each ground plane connected only at the GND pin of the device. A true ground plane and short connections to all capacitors will improve performance and ensure proper regulation under all conditions.
